

108-core optical fiber cable color spectrum

Overview

This guide explains the latest EIA/TIA-598-D fiber color-coding standard used to identify fiber types, inner fiber sequences, and connector polish styles. With clear tables and updated details, it serves as a comprehensive reference for technicians handling modern fiber optic. Understanding fiber-optic color codes is essential for any technician tasked with installing, maintaining, or troubleshooting modern fiber networks. Originally developed by the Electronic Industries Alliance (EIA) and the Telecommunications Industry Association (TIA), the TIA-598-D standard (formerly EIA/TIA-598) remains the most recognized color-coding system for optical fibers worldwide. It defines color codes for: The main aim is to come up with a harmonized approach across cable manufacturers, thereby, ked with different colors and bar codes to facilitate identification. Hexatronic offers cables with color code systems according to all interna ional and national standards and for all types of fiber opti such as a tube, ribbon, yarn wrapped bundle or other types of bundle.
