

Price of Empty Secondary Distribution Box

AI Overview

Empty secondary distribution boxes typically range from \$5 to \$200 or more, depending on size, material, and features.

Price Range

- Basic small plastic units:** Starting around \$4.50 to \$20 for single-phase or small residential enclosures, suitable for indoor use.
- Medium-sized modular or DIN-rail enclosures:** Typically \$30 to \$100, accommodating multiple circuit breakers or control modules, often used in residential or light commercial settings.
- Industrial-grade metal or weatherproof boxes:** Can cost \$100 to \$200+, designed for outdoor or heavy-duty applications, offering robust protection, corrosion resistance, and compliance with IP65 or higher standards.

Factors Affecting Price

- Material:** ABS or polycarbonate plastic is lightweight and corrosion-resistant, while metal enclosures provide better mechanical protection and heat dissipation.
- Size and Capacity:** Larger boxes with more rows or modules for circuit breakers increase cost.
- Indoor vs Outdoor:** Weatherproof or IP-rated boxes for outdoor use are more expensive than indoor-rated units.
- Mounting Type:** Surface-mounted boxes are generally cheaper than flush-mounted units, which require embedding into walls.
- Additional Features:** Transparent doors, secure locks, ventilation slots, and compatibility with smart monitoring systems can raise the price.

Applications

Empty secondary distribution boxes are used in residential wiring, commercial installations, industrial settings, and utility infrastructure. They serve as housings for circuit breakers, switches, and protective devices, ensuring safe and organized electrical distribution.

By considering these factors, you can select a distribution box that balances cost, durability, and functionality for your specific installation needs.
