

Universal adapter for optical power meters

AI Overview

A universal connector for optical power meters allows multiple fiber optic connector types to connect to a single port, typically using 1.25 mm or 2.5 mm ferrule adapters for accurate optical power measurement.

Overview Universal connectors are designed to accommodate a variety of fiber optic connector types, including LC, MU, SC, ST, FC, and other SFF connectors, without requiring separate dedicated ports for each type. They work by inserting the ferrule into a universal adapter port, which aligns the fiber with the photodetector to ensure accurate readings regardless of connector orientation or slight movement.

Ferrule Sizes and Adapter Types

- 1.25 mm ferrules:** Used for LC, MU, and other small form factor (SFF) connectors. Example: OWL U1.25-4 universal adapter fits all current OWL optical power meters and allows multiple SFF connectors to connect to the same port.
- 2.5 mm ferrules:** Used for ST, SC, FC, and similar connectors. Universal adapters for this size allow standard simplex or duplex connectors to interface with the power meter.

Key Features

- Compatibility:** Supports both simplex and duplex connectors, as well as PC and APC polish types in some models.
- Durable construction:** Many universal adapters feature tough metal bodies for long-term use.
- Ease of use:** No latching mechanism is required; the ferrule is simply inserted into the port, and the adapter ensures proper alignment with the photodetector.
- Cost and maintenance efficiency:** By using a single universal port, multiple connector types can be tested without changing adapters, reducing costs and simplifying maintenance.

Examples of Universal Adapters

- OWL U1.25-4:** 1.25 mm universal adapter for LC, MU, and other SFF connectors.
- Kingfisher XL Series:** 1.25 mm and 2.5 mm universal adapters: Compatible with simplex and duplex connectors, including LC, SC, FC, ST, and MTP/MPO connectors.
